

Keegan Ridgley Q1 Project Retro / Assess

Start:

I need to start using the tracker more often than I did on the Q1 project and use it in combination with the wireframing and project planning phase to breakdown the process into smaller chunks. I set a reasonable goal and met my MVP early which left me in a position to work through stretch goals.

Stop:

I need to stop working on multiple stories at once. I also need to reign in the scope of my stretch goals and extend the scope of my regular ones. I need to stop waiting till the last possible second to style my pages and work on making more valid semantic html instead of using nested divs.

Continue:

Finish the functionality first and fill out the form later. I used the pivotal tracker and that was a boon for my productivity by keeping my focus on one issue at a time. I reached out early when I needed help and deployed often and after every major change.

Complete projects using an agile workflow

3

Break a project into stories

3

Participate in agile retrospectives

3

Deploy a Static Site

3

Write valid and semantic HTML5 Markup

3

Style HTML e

3

Write JavaScript against the DOM API

3

Fetch and send JSON with AJAX

2

Use CSS to create responsive pages

2

Build a Responsive Web Page with a CSS Framework
